ATTENTION: INVISIBLE WORKFORCE

CARPE VERUM

Seize the Truth.

Don't let AI replace you.

RECRUIT IT.

70%	42%	0%
of enterprise transformations fail	of role knowledge is undocumented	of AI systems that asked you first

They're automating fiction.

Every AI your organization deploys is learning from documentation and system logs — the designed version of your job. Not the real one. Not the workarounds you built, the judgment calls you make daily, the exceptions you handle that keep the operation alive. They hired consultants who interviewed your VP. They reviewed process maps that haven't been updated in years. They're building a future on a foundation that's half-missing. And they never asked you.

You have a counter-move.

RoleUp is AI that listens to you first. In 20 minutes, it captures what you actually know — the real version of your role that exists nowhere in any system. Your expertise gets a permanent, formal, protected address. Not a performance review. Not a job description. The truth.
Before they automate the lie, show up with the truth.
Before they redesign your role without you, make yourself impossible to overlook.

A MESSAGE FOR ANYONE WHO ACTUALLY DOES THE WORK

CARPE VERUM

Seize the Truth.

Don't let AI replace you.

Recruit it.

Right now, your organization is deploying AI trained on documentation that's maybe 20% complete. The other 80%? It's in your head. Your workarounds. Your judgment. The things you know that nobody ever wrote down.

They're about to automate the fiction. The process maps that nobody follows. The documentation that's three years out of date. The "current state" that a consulting firm built from interviews with your VP — who hasn't done your job in a decade.

And when it breaks — and it will — they won't ask what went wrong. They'll just try again. Louder. Faster. More confidently. Without you.

Or you could get there first. Sit down with an AI that's built to listen to you. Capture what you actually know. Give your expertise a permanent address. And make yourself impossible to overlook, impossible to misunderstand, and impossible to replace.

DOWNTOWN BUS AD IDEATION

Carpe Verum Campaign Concepts

Six bus ad variations for San Francisco transit.
Each ad follows the same emotional arc in under
four seconds of reading:

1. CARPE VERUM — intrigue
2. Seize the Truth — gravity
3. The hook — recognition of fear
4. The flip — agency and action

Different buses, different nerves, same destination.
Someone sees Bus 1 on Monday and thinks "recruit it."
They see Bus 3 on Wednesday and think "that's true."

By Friday they've gone to roleup.me.

Format: External bus display ad (king size: 30" x 144")
Target: San Francisco MUNI / Golden Gate Transit routes
CTA: roleup.me

BUS AD CONCEPTS 1–3

1 THE FLAGSHIP

CARPE VERUM

Seize the Truth.

Don't let AI replace you.

Recruit it.

roleup.me

The anchor ad. Four beats: intrigue → gravity → fear → the flip. "Recruit it" is the entire paradigm shift in two words.

2 THE PROVOCATION

CARPE VERUM

Seize the Truth.

They're training AI on your job description.

Not your job.

roleup.me

Hits the specific anxiety: AI is learning the wrong version. Makes the reader think "wait, that's exactly what's happening."

3 THE CONSPIRACY

CARPE VERUM

Seize the Truth.

AI has read every doc about your role.

It's never heard your side.

roleup.me

Personifies AI as a listener that's only heard one side of the story. Creates empathy and urgency simultaneously.

BUS AD CONCEPTS 4–6

4 THE GUT PUNCH

CARPE VERUM

Seize the Truth.

42% of what you know isn't written down anywhere.

Until now.

roleup.me

Leads with the stat. Makes it personal — "what YOU know." The payoff is short and confident. Data-driven anxiety meets resolution.

5 THE DARE

CARPE VERUM

Seize the Truth.

What if AI worked for you first?

roleup.me

roleup.me

A question, not a statement. Invites imagination. Drops the personal URL as the answer. Most direct path to conversion.

6 THE SHORTEST

CARPE VERUM

They automated the manual.
Nobody asked you.

We do.

roleup.me

CAMPAIGN STRATEGY

THE FLEET EFFECT

These ads are designed to work as a fleet, not individually. Each bus hits a different nerve but they all land in the same place. Repeated exposure across different routes creates a cumulative effect:

Monday:	Rider sees Bus 1. Thinks "huh, recruit it."
Wednesday:	Rider sees Bus 3. Thinks "that's actually true — the AI stuff my company is deploying IS just learning from the docs."
Friday:	Rider sees Bus 5. Goes to roleup.me.

THE TWO-AUDIENCE PLAY

San Francisco buses carry two distinct audiences who see the same ad and have completely different reactions:

Tech workers building AI: "That's a clever product."
Knowledge workers fearing AI: "That's for me."

Both go to the site. The tech worker evaluates the technology. The knowledge worker evaluates the promise. Both enter the funnel from different doors.

CONVERSION PATH

Bus Ad → roleup.me (the movement, the manifesto)
→ my.roleup.me (personal assessment, "what walks out the door when you do?")
→ app.roleup.me (solo AI capture session)
→ campfire.roleup.me (team sessions)
→ abraxis.ai (enterprise platform sale)

The bus ad is the top of a funnel that converts street-level awareness into enterprise pipeline. Every practitioner who engages becomes an internal champion who walks into their CIO's office and says: "Have you heard of ABRAXIS? Our people are asking for this."

THE TAGLINE SYSTEM

All ads share a consistent brand architecture:

Title:	CARPE VERUM
Subtitle:	Seize the Truth.
Hook:	[varies by ad — the specific provocation]
Flip:	[varies by ad — the agency moment]
CTA:	roleup.me / my.roleup.me
Tagline:	Turn the tables. Conspire with AI. Secure what's next.
